Project Development Phase

Model Performance Test

Date	21-10-2026
Team ID	23KD1A0571
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration Guide
Maximum Marks	10 Marks

Model Performance Testing:

The table below records how the Employee Raise Issue solution was tested, with the results and the screenshots taken during testing.

S.No.	Parameter	Values	Screenshot
1.	System Summary	Employee Raise Issue solution developed on ServiceNow. Employees open the Requesting portal, use the Raise an Issue widget and fill in the Raise Employee Issue form (requester, category, subcategory, state and short description). The issue is saved in a custom table with an auto-generated number, and UI Policies and dependent choices keep the data consistent.	
2.	Functional Accuracy	Test cases passed: 9 of 9 (100%) • Portal access – 1 of 1 • Portal widgets – 2 of 2 • Record Producer form – 2 of 2 • Record creation with auto-number – 1 of 1 • Form rules (UI Policies) – 2 of 2 • Category–Subcategory dependency – 1 of 1 (table form)	
3.	Performance Testing	Response times were not measured in the project record. During the test run the portal page, the Raise Employee Issue form and the submission all worked without problems.	—
4.	User Acceptance Testing	The portal, the widgets, the Raise Ticket link, the form submission and the field restrictions were tested from start to end and worked as configured. No defects are recorded; the open observations are listed in the UAT report.
